

RECORDS OF VERMONT BIRDS

VERMONT INSTITUTE OF NATURAL SCIENCE

VOL. 27, No. 4

FALL 1999

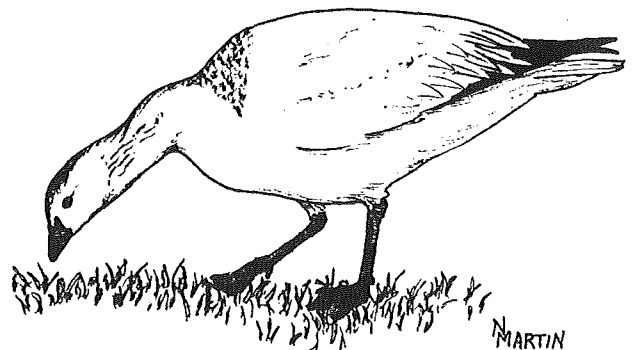

1 August - 30 November

Anne T. Aversa, Seasonal Editor

The fall of 1999 was spectacular in many ways. The weather, warm and snowless, provided birds with a wide window for migration and may have accounted for the 258 species that were reported. August 19th witnessed the unusually early arrival of 3 **Brant**, one of whom remained until 14 September. **Hudsonian Godwit** were found from September through late October. **Snow Geese** lingered at DCWMA as waters remained open, and no fewer than 22 reports of **Jaeger**, including all three species, were submitted to the Vermont Bird Records Committee. At this printing all reports have been tabled for further scrutiny but we anxiously await the outcome. The Records Committee will also be making decisions at its next meeting concerning other Rare Species Documentation (RSD) reports, including

White-fronted Goose, Great Cormorant, Black Guillemot, Purple Sandpiper, Yellow-throated Warbler, Western Tanager, and Northern Wheatear.

A 5th state record **Black Vulture** was seen in Colchester by Dick Lavallee, giving credence to the report of a bird seen last fall by Liz Lackey. Could this southern species be extending its territory into Vermont? Two 8th State Records were set with a **Sabine's Gull** seen in Milton in mid-September by Allan Strong, and a **Black-headed Gull** that was spotted in Ferrisburg by Judy Peterson and Sue Wetmore. Reports of **Sandhill Crane** were received from 27 August until 7 October.

LOONS THRU WATERFOWL

Lake Champlain, Vermont's Great Lake, continued its role as a major migration route for waterfowl. **Horned** and **Red-necked Grebe**, as well as **Red-throated Loon** began appearing in mid-October. Shelburne Farms hosted 55 **Cattle Egret** in late August, and 11 **Great Egret** were found in Colchester on 7 September. **Snowy Egret** appeared in Rockingham and Colchester, while in Shelburne **Glossy Ibis** stayed from mid-August through early September. Two of the Ibis sported silver bands, possibly birds banded on Four Brother's Island earlier in the year. Several thousand **Snow Geese** remained at DCWMA throughout the season and there were reports of **Ross' Goose**, including at least one possible blue morph hybrid. All three races of **Canada Goose** were reported. **Barrow's Goldeneye** visited Burlington and Grand Isle, while large numbers of **Hooded Merganser** enjoyed the open ponds and lakes throughout the State. A pair of **White-fronted Geese** were reported from East Dorset from mid- to late-October. Only one report for **Redhead** was made from South Alburg on 12 October.

HAWKS THRU WOODPECKERS

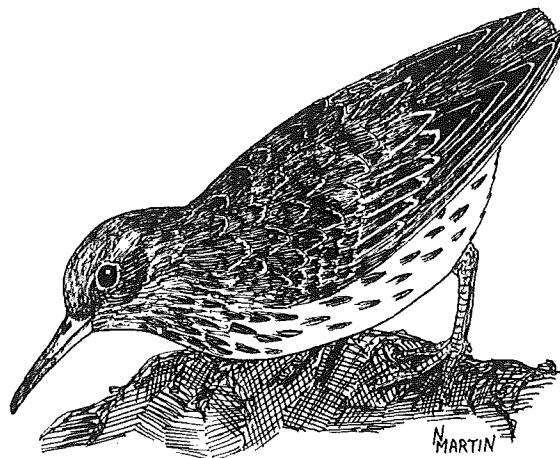

Hawk watchers reported numbers up from the previous year with more **Golden Eagle** and **Rough-legged Hawk** seen at Putney Mountain. **Osprey**, **Bald Eagle**, and **Peregrine** numbers were also high, but **Merlin** numbers were slightly down. Gallinaceous birds were well represented but there was only one report for **Spruce Grouse**. **Ring-necked Pheasant** were reported from Shoreham, Panton, and Addison and there was one report for **Northern Bobwhite**. Shorebirds enjoyed the exposed mudflats created by lack of rain as they migrated in early August. Winooski Delta Park and Prunier Road in Weybridge hosted **Buff-breasted Sandpiper**, while a **Hudsonian Godwit** was enjoyed at DCWMA. Two **Long-billed Dowitcher** were carefully observed in Highgate but unfortunately no RSD report was submitted. All three species of **Phalarope** were reported, and a **Whimbrel** was seen at the mouth of the Lamoille River on 5 September. In early November a more arctic air flow produced **Jaeger** and **Purple Sandpiper**. Jaeger were observed in record numbers on Lake Champlain thanks to Ted Murin's morning watches. Nine species of gull were reported including a probable **Glaucaus/Herring hybrid**. Three **Laughing Gull** were spotted in Addison, and **Little Gull** were observed from 3 August though mid-November. Lake Morey provided an unusual resting stop for a **Black-legged Kittiwake**. Late November produced an immature **Great Cormorant** at the Burlington breakwater. The record **Black-headed Gull** was found at the mouth of the Little Otter on 4 October. A possible 4th State record **Black Guillemot** was seen on 30 November. **Red-bellied Woodpecker** were reported from Shaftsbury, Brandon, Bridport and from Norwich, but only one **Black-backed Woodpecker** was reported from Ferdinand.

FLYCATCHERS THRU EVENING GROSBERAKS

August saw the exodus of most flycatchers, vireos, and swallows. Only one report for **Veery**, as well as **Northern Mockingbird**, was received, while a lingering **Wood Thrush** was seen on 30 November. VINS banders reported below average capture numbers for **Wood Thrush**. Button Bay State Park in Ferrisburg sheltered a **White-eyed Vireo** on 9 September. In late September, **Fox Sparrow** began arriving, followed in mid-October by **White-crowned Sparrow** and peak numbers of **Dark-eyed Junco**. October 21st saw the first of many immature **Northern Shrike** to enter Vermont, while good numbers remained into the winter season. Only one **Gray Jay** was reported while another boreal passerine, **Boreal Chickadee**, showed up in three locations. **Purple Finch** and **Pine Siskin** were scarce and remained so into the winter. **House Finch** however, appear to be on the mend with numbers rising from previous lows. Mid-October brought the first of **Bohemian Waxwing** whose numbers became abundant. Twenty-six species of warbler were reported, including 2 **Connecticut Warbler** banded at VINS, 2 **Yellow-throated Warbler**, **Cape May Warbler**, and two reports of **Orange-crowned Warbler**. Lingering warblers included a **Yellow-rumped Warbler** through the end of October, a **Black-throated Blue Warbler** until 2 November, and a late adult **Pine Warbler** taking advantage of a feeder in Pantton on 12-13 November. **Pine Grosbeak** were observed in East Hardwick on 15 October. In early August a **Western Tanager** was observed on two occasions in Weybridge. Late November brought the first of many **Redpoll**, but only one report for **Red Crossbill** and none for **White-winged Crossbill** was received. Lastly, a **Northern Wheatear** was reported from Underhill on 28 October.

SWMA	Sandbar Wildlife Management Area
TWDR	Thurman W. Dix Reservoir
MNWR	Missisquoi National Wildlife Refuge

CORRECTIONS:

In the Summer 1998 issue of RVB, a sighting of a Pied-billed Grebe with 6 young was mistakenly reported as a Red-necked Grebe. In addition, the issue was published as Vol. 26, No. 2 instead of the correct, Vol. 26, No. 3. In the Fall 1998 issue (Vol. 26, No. 4), many sightings submitted by Carol Wagner (CCW) were mistakenly attributed to Chris Williams (CW). We regret these errors.

RECORDS OF VERMONT BIRDS

Steve Faccio, *Managing Editor*

Nancy L. Martin, *Illustrator*

Sarah B. Laughlin, Whitney D. Nichols,
Vermont Bird Records Committee Co-Chairs

SEASONAL EDITORS

Spring 1 March - 31 May: Judith A. Peterson
Summer 1 June - 31 July: Susanne Wetmore
Fall 1 August - 30 November:
Anne T. Aversa
Winter 1 December - 28 February: Frederick Pratt

RECORDS OF VERMONT BIRDS is published quarterly by the Vermont Institute of Natural Science. A one-year subscription, which includes the newsletter *Vermont Birds*, is \$12. Contributors are advised to send accounts of rare or unusual bird sightings to VINS as soon as possible, or to call the Vermont Bird Alert (802-457-2779). Regional summaries of bird sightings are due to VINS promptly at the end of each season. Sighting cards are available from the Vermont Institute of Natural Science,

27023 Church Hill Road,
Woodstock, VT 05091-9642,
or by calling
(802) 457-2779.

NOTES ON THE DOCUMENTATION OF RARE BIRD SPECIES

The Vermont Bird Records Committee (VBRC) emphasizes the importance of detailed, descriptive documentation of all rarities, rare nesting species or out-of season species. It is frustrating for both the observer and the committee to have a tantalizing sighting of a rare species rejected for listing due to insufficient details.

The committee is anxious to involve all Vermont birders in producing as accurate a Vermont state list as possible. This list and all documentation must be credible to future ornithologists who will use the material for research.

In the field, writing down the salient points of identification, talking into a tape recorder, making a sketch or taking a photograph are ways to help with accurate recounting later.

The Rare Species Documentation (RSD) form is both for filing the reports and is intended as a guide for the information needed. After completing the first page, reporters may prefer to write the description of the bird on a separate sheet of paper while also checking the form for the details requested. The committee welcomes suggestions for improving the reporting and voting process.

Again, the VBRC expresses its thanks to all observers who have contributed valuable information to the Vermont state list.
