

# Focused Loon Surveys - chick survival (UPDATED mid-July)

\* Focused loon surveys- chick survival (mid-August through early Sept.)

Not all Loonwatch Day surveys from July 16 have been updated in the chick #'s listed below.

"all season" list is comprehensive and includes priority 1, 2, and 3 lakes in need of more surveys

Lake Categories

Priority 1 – territorial and nesting loons

Priority 2 – potential pairs and recent two-loon sightings

Priority 3 – tend to be smaller, occasional loon sightings, no breeding history

## After your survey(s), send an email to: [loon@vtecostudies.org](mailto:loon@vtecostudies.org)

Eric Hanson, VLCP Coordinator, [ehanson@vtecostudies.org](mailto:ehanson@vtecostudies.org) 802-586-8065

or enter data on VT ebird and share your observaton with Eric (see VCE website for full ebird entry instructions)

Regions: cha-n: champlain valley north                      nc: north central

                  ec: east central                                      nek: northeast

                  gm-s: green mountain south                      wc: west cental

Chicks can become more independent of the parents in Aug./Sept. If "extra" loons present, chicks will lay low and could be hard to find.

Lake	Town	Region	Lake Area	best survey method	What to look for	Priority	# chicks as of early-mid July
